About

I specialise in Javascript/Typescript development using modern framework frontend or backend, although I am also comfortable with the whole devops stack Docker, Google Cloud Platform... I'm a versatile developer and I love to understand things from the bare metal up to the end user. Finally, I have experience working remotely and I can help a team integrate remote workers. I'm able to adapt to various team sizes and various business contexts. As a lead developer, I can help a team make pragmatic decisions about which library or framework to use for a specific task and how to design a technical solution to a business problem. I'm a very positive person, always seeking the best out of someone else (even though I enjoy a bit of troll about tech stacks from time to time).
